Construction of a New Bridge near Levunovo village

3.

25X1

the section of the Levunovo-Sandanski road between the village and the bridge over the Potoka River is under construction. The middle support of this old iron bridge had been broken, and the road was being realigned to connect with the new bridge which will be built about 250-300 meters east of the old one.

4. The detour has a length of about 900-1,000 meters and is the same type construction as the old bridge. By May 1953 the part of the detour between the village and the Potoka River had been completed, and the remaining parts are still under construction. The construction of the bridge still has not started, and no construction materials were noted to indicate that the bridge was about to be started.
